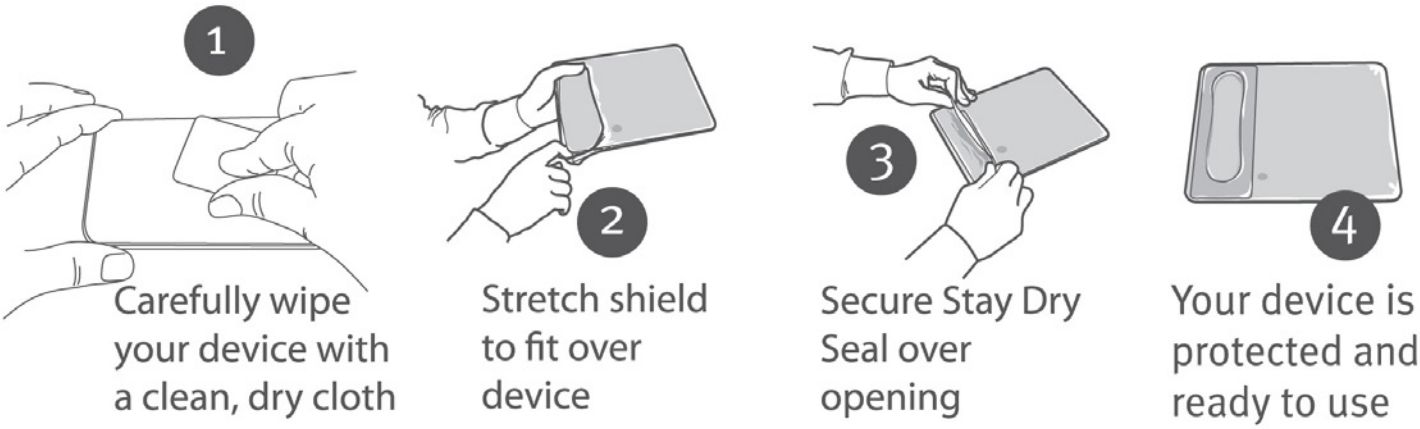
Each shield slips onto your device in seconds, and is reusable and recyclable



1
Carefully wipe your device with a clean, dry cloth
2
Stretch shield to fit over device
3
Secure Stay Dry Seal over opening
4
Your device is protected and ready to use

Cleaning Instructions

Seal Shields™ are easy to use! They can be quickly cleaned and disinfected with your iPad® still inside. We recommend you protect your iPad® with Seal Shields™ so you can regularly clean and disinfect them with bleach wipes (Clorox® Disinfecting Wipes or similar), or quaternary ammonia wipes (PDI Super Sani-Cloth™ Wipes or similar). When using wipes, be sure to clean all surfaces thoroughly and allow to dry before using

Alternatively, the product can be washed in a solution of any of the products below and then rinsed under running water. Before washing, please inspect your device carefully for any openings or splits in the plastic that may cause leakage.

Clorox® Bleach.....Up to 50% dilution to warm water

Pine Quat 64 Disinfectant.....100% concentration

64 General Purpose Disinfectant.....100% concentration

VirkonS™.....10% dilution to warm water

Softsoap®.....Approximately 2% dilution to warm water

Ali-Flex®.....100% concentration

Windex®.....100% concentration

Product testing was performed by submerging the unit in each of the above cleaning/disinfecting solutions at the recommended concentrations with no apparent damage to the Seal Shields™ plastic sleeve or the Stay Dry Seal.
